PROJECTS

Snap | Rails, React, Redux, PostgreSQL   Live / GitHub
A live chat app for custom group messaging inspired by Slack. Built on Rails and React using Redux
• Structured complicated channels/direct messaging system with features including drag-and-drop users in direct messaging and instant auto filtering for adding members and channels
• Implemented tab and desktop pop-up real time notifications using JS
• Programmed live update of online status with websockets, AJAX, and precise SQL querying to optimize efficiency

Datum | SQL, Ruby   GitHub
A library to facilitate working with Relational Databases.
• Leveraged metaprogramming to translate Ruby methods and classes into SQL queries, making single step or multiple step associations possible

Phi-Syx | JavaScript, HTML5   Live / GitHub
Collection of unique minigames created with realistic object interaction
• Implemented a dynamic collision detection system using calculation of vectors
• Created interactive round selection to further increase user experience
• Preloaded with cache system at the start of each round to reduce lag

EDUCATION

App Academy   Fall 2016
A 1000-hour software development course with <3% acceptance rate

University of Massachusetts Amherst   2009-2013
Bachelor of Science (B.S.), Biology**:** 3.6 Science GPA
